

Advanced Open Play - Project Infrastructure Summary

Last updated: 2026-04-06T11:53:02.299Z

Purpose

This is the operational knowledge base for links, services, and servers used to maintain, test, build, and deploy the Advanced Open Play project.

Core Paths

- Project root: `Programs/Pickleball/advanced-open-play/`
- Deploy source (Firebase Hosting public): `Programs/Pickleball/advanced-open-play/live`
- Firebase rules file: `database.rules.json`
- Runtime mode file: `Programs/Pickleball/advanced-open-play/openplay-mode.json`

Public Web Links

Surface	URL
Account	https://pickleball-advanced-open-play.web.app/SouthEnd_OpenPlay_Account.html
RSVP	https://pickleball-advanced-open-play.web.app/SouthEnd_Session_RSVP.html
Session Check-in	https://pickleball-advanced-open-play.web.app/SouthEnd_Session_Checkin.html
Admin Activity	https://pickleball-advanced-open-play.web.app/SouthEnd_Admin_Activity.html
Alternate Hosting Domain Pattern	https://pickleball-advanced-open-play.firebaseio.com/...

Cloud Services In Use

Service	Purpose	Endpoint / Reference
Firebase Hosting	Serves production static app from <code>live/</code>	https://pickleball-advanced-open-play.web.app
Firebase Authentication	Account sign-up/sign-in/password reset	authDomain: <code>pickleball-advanced-open-play.firebaseio.com</code>
Firebase Realtime Database	RSVP, profiles, admin UIDs, activity feed	databaseURL: https://pickleball-advanced-open-play-default-rtdb.firebaseio.com
Firebase Web SDK (compat v10.7.1)	Client SDK loaded at runtime	https://www.gstatic.com/firebasejs/10.7.1/
Google Fonts	UI typography	https://fonts.googleapis.com
cdnjs QRCodeJS	QR code rendering in RSVP page	https://cdnjs.cloudflare.com/ajax/libs/qrcodejs/1.0.0/qrcode.min.js
FormSubmit	Email relay used by RSVP flow	https://formsubmit.co
Zelle QR enrollment link	Payments shortcut surfaced in RSVP page	https://enroll.zellepay.com

Firebase Project Snapshot

- projectId: `pickleball-advanced-open-play`
- authDomain: `pickleball-advanced-open-play.firebaseio.com`
- databaseURL: <https://pickleball-advanced-open-play-default-rtdb.firebaseio.com>
- openplay-mode activeTree: `live`
- openplay-mode allowProductionHostingDeploy: `true`

Realtime Database Namespaces

- `openplay_se/rsvps`
- `openplay_se/admin_uids`
- `openplay_se/user_profiles`
- `openplay_se/activity`

Local and Maintenance Servers

Server	How to Run	URL
Local Open Play QA hub	<code>npm run local-test</code>	http://127.0.0.1:3456/local-page/index.html
Local website dev server	<code>npm run start</code> or <code>npm run dev</code>	http://127.0.0.1:3000/
Static local server	<code>npm run serve</code>	http://127.0.0.1:3000/

Build / Deploy / Workflow Commands

- `npm run local-test -> node Programs/Pickleball/advanced-open-play/testing/scripts/local-test.js && npx live-server --port=3456 --open=/local-page/index.html`
- `npm run local-test:sync -> node Programs/Pickleball/advanced-open-play/testing/scripts/local-test.js`
- `npm run deploy:openplay -> node Programs/Pickleball/advanced-open-play/scripts/openplay-deploy.js --only hosting`
- `npm run deploy:openplay:all -> node Programs/Pickleball/advanced-open-play/scripts/openplay-deploy.js --only hosting,database`
- `npm run firebase:deploy-rules -> npx firebase-tools deploy --only database --non-interactive`
- `npm run openplay:promote -> node Programs/Pickleball/advanced-open-play/scripts/openplay-promote-staging-to-live.js`
- `npm run openplay:bootstrap-staging -> node Programs/Pickleball/advanced-open-play/scripts/openplay-bootstrap-staging.js`
- `npm run openplay:sync-from-live -> node Programs/Pickleball/advanced-open-play/scripts/openplay-sync-from-live.js`
- `npm run openplay:use-staging -> node Programs/Pickleball/advanced-open-play/scripts/openplay-switch-tree.js staging`
- `npm run openplay:use-live -> node Programs/Pickleball/advanced-open-play/scripts/openplay-switch-tree.js live`
- `npm run test -> node --test Programs/Pickleball/advanced-open-play/testing/unit/test-openplay-rsvp.js Programs/Pickleball/advanced-open-play/testing/unit/test-firebase-rules.js`
- `npm run start -> npx live-server --port=3000 --open=/`
- `npm run dev -> npx live-server --port=3000 --open=/ --watch=.`
- `npm run serve -> npx serve -l 3000`

Key Project Surfaces to Maintain

- `live/` -> production source of truth for Hosting deploy output.
- `staging/` -> development tree for iterative edits before promotion.
- `scripts/openplay-deploy.js` -> deploy guard enforcing active tree and production deploy lock.
- `testing/scripts/local-test.js` -> mirrors active tree into local test hubs.
- `live/js/openplay-firebase-config.js` -> Firebase project wiring used by runtime.
- `live/js/south-end-openplay-sync.js` -> auth/database sync and shared client logic.
- `database.rules.json` -> Realtime Database read/write rules.

Update Behavior

This document and its PDF are auto-generated by `npm run summarize`.

- First run: creates `knowledge base/OPENPLAY_PROJECT_SUMMARY.md` and `knowledge base/OPENPLAY_PROJECT_SUMMARY.pdf`
- Later runs: overwrite both files with the latest snapshot
